

Texas Instruments TI-92 Display Replacement

Written By: Daniel Maldonado

INTRODUCTION

In this guide we will show how to remove the display to replace it if broken.

- *incomplete we currently do not know how to do this and can find no information on it*

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — Back Cover

i The first step to any repair operation is to remove the front cover.

- Grab the back of the calculator with one hand and the cover with the other.
- Pull the cover off from one of the sides for easy removal.

Step 2

- Orientate the calculator with the top facing towards you.
- Slide the locking tab, found on the top part of the calculator, to the unlock position.

Step 3

- "Locking Tab"
- To remove the back cover, slide the cover away from the locking tab towards the bottom of the calculator until the cover no longer slides.
- Then with the front of the calculator facing down, pull up on the back cover.
- The calculator should now be orientated with the front facing down, as shown in picture 2.

Step 4 — Batteries

- i** The Batteries are now exposed and the calculator is face down with the back towards you.

 - Remove the bottom batteries by pressing the battery towards you while pulling it out from the far end.
- i** If you can not do the previous step with your finger try using a flat ended tool such as an Ipad opening tool.

 - After the bottom battery has been removed push or slide the other(*top*) battery towards you until it is fully exposed in the battery slot.
 - Now simply remove the battery.

Step 5 — Texas Instruments TI-92 Back Case Disassembly

- Using a Philips Screwdriver #00 unscrew the twelve 11.8mm screws shown in the picture and located on the back of the calculator.

Step 6

- Unscrew the 19mm screw located near center of the back of the calculator.
- Remove the panel being held by the screw.

Step 7

- Using the same Phillips screwdriver, unscrew the remaining three 11.8mm screws.

Step 8

- Using the Ipod Opening Tool pull up on both sides of the rectangular module while keeping the rest of the calculator flat on a surface face down

⚠ You may get a lot of resistance from the module. Do not use too much force as you risk damage. Use small amounts of force to work the module out.

Step 9

- Pull out the rectangular module when it is finally loose enough.

Step 10

- Now pull up on the back cover of the calculator while holding the rest of it flat on a surface.

⚠ Be careful not to tilt the front of the calculator at this point. The keyboard buttons are now unsupported and will fall out of place.

Step 11 — Motherboard

- Pull the motherboard up while holding the rest of the calculator firmly in place
- The motherboard has now separated from the rest of the calculator

Step 12 — Display

- ⓘ Place the motherboard flat on a surface with the LCD screen facing down.
- Using a #00 Philip Screwdriver remove the screw located on the left side of a spring-like object located near the center of the motherboard.

Step 13

- Lift up on the material covering the motherboard starting from the upper right corner. Peel foil back only about half way down.

⚠ Make sure to slowly lift up on the plastic of the covering material and not the foil or the foil will rip.

Step 14

- Now slowly lift up the black tape located at the top of the calculator.

⚠ You will need to replace tape if removed so if you do not have this replacement part do not attempt to remove it

Step 15

- Tilt the calculator up from the front so that you can see the LCD screen
- Finish removing the black tape on this side of the motherboard.

Step 16

 ***Do not know next step***

To reassemble your device, follow these instructions in reverse order.
